Data Quality

QAS Capture

Ensure domestic and international address accuracy at point of capture

Is your business struggling to maintain the quality of postal address information you hold? Is this resulting in a high level of returned mail or packages? Experian Data Quality can help. QAS Capture is a data quality application which has been specifically designed for the needs of companies ranging in size from SME to Enterprise. The application enables your business to capture domestic or international addresses accurately and in full, at the point in which they are entered into your internal systems.

QAS Capture has been designed to fit around the needs of your business. The application is powered by our cloud technology which means that there is no need for you to manually update your data as we do this for you centrally reducing dependency on your internal IT resources. This gives you one less thing to worry about and more time to focus on running your business.

Business Benefits

Business Efficiencies
Full and accurate address information reduces the administration time required to process returned mail or packages.

Reduced Key Strokes
Automated address capture means that employees spend less time manually entering address information.

Experian Data Compatibility
Enhance the address information you capture with the power of Experian data including Business, Names and International Data.

Powered by the Cloud
The Experian Data Quality On Demand platform is fully maintained, updated and supported 24/7 in our secure facilities. This means all data updates are completed by us and you won't receive data updates via CD.

Flexible Installation Options
After installation you have the option to access the application stand-alone via your desktop and define rules to paste back address information into an underlying application.
