Data enrichment

Enhance customer intelligence and enable effective lead follow-up

Experian Data Quality’s data enrichment services provide better insight into individuals at the point of interaction. Businesses can now tailor messages, prioritize leads, personalize offers and improve engagement online, over-the-phone and through marketing communications.

The need for third party intelligence continues to increase as organizations look to improve consumer engagement and prospecting efforts. Without accurate and complete consumer data, businesses will continue to rely on flawed analytics, ultimately harming the customer experience and diminishing operational efficiency.

Benefits of data enrichment

Our data enrichment software provides greater consumer insight for more effective marketing and business processes. Experian’s data sets can provide you with a number of information types, including demographic, behavioral, household, life event, geographic, and more. When this information is paired with your own internal data, you can create a more complete customer profile and provide them with a more personalized user experience.

Using data enrichment will:

- Ensure personalized messaging
- Improve marketing return on investment
- Increase website conversion and streamline lead follow-up

Features

- Flexible integration methods to suit any technical environment privacy and security
- Wide breadth of attributes including consumer, business, and geolocation data
- Unparalleled data accuracy from Experian’s ConsumerView™ database
- Top security measures backed by Experian, a global leader in data
We offer three varieties of data enrichment services

**Data enrichment based on the IP address**
Use our web service to predict the location of the IP address of your customers and gain insight into hundreds of attributes that enable personalized website displays, increased site conversion, and ability to provide a more personalized user experience.

**Data enrichment based on name and address**
Leverage this service to increase insight at the point of consumer data collection. The software verifies contact information, provides additional data attributes, and can score the record for actionable follow-up, all in real time.

**Predictive modelling using data enrichment**
Build models with predictive analytics to prioritize lead follow-up, provide tailored product or offer recommendations and enable more intelligent interactions. We offer a real-time web service or take advantage of our seasoned analytics consultants to make smarter decisions with our industry-leading data sets.

Examples of consumer insight offered from data enrichment

<table>
<thead>
<tr>
<th>Behavioral insights</th>
<th>Demographic insights</th>
<th>Financial insights</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interest in arts and culture</td>
<td>Age</td>
<td>Propensity to buy</td>
</tr>
<tr>
<td>Community views</td>
<td>Occupation</td>
<td>Credit worthiness</td>
</tr>
<tr>
<td>Healthy living</td>
<td>Life stage</td>
<td>Wealth indications</td>
</tr>
<tr>
<td>Channel receptivity</td>
<td>Socio-economic interests</td>
<td>Investor status</td>
</tr>
</tbody>
</table>

Real-time data enrichment connects businesses to Experian’s vast consumer data and provides more timely and specific insights. Organizations will be able to gain information into their online audience or build individualized insight on their customer databases.
