Experian Pandora for Data Migration Leaders

Helping you consistently deliver a high-quality data migration that runs on-time and on-budget

Take control of your data assets with Experian's next generation data migration technology

Experian Pandora

As a data migration leader, you face many challenges:

- Lengthy delivery cycles due to manual development and data handling
- Constant pressure from stakeholders to bring the project in on-time
- Lack of coordination and collaboration amongst team members
- Poor adoption of a proven data migration methodology
- Excessive risk in the proposed data migration strategy
- Insufficient support from the business community

Faced with these type of demands, data migration leaders are increasingly turning to Experian Pandora to help plan, design, deliver and validate, their complex data migration initiatives.

Experian Pandora is designed for the modern data migration leader who needs to ensure that the target environment is populated with high-quality data while ensuring effective coordination and collaboration, all to a tightly controlled budget and timescale.

"One of our associate data migration analysts was able to complete a data migration impact assessment of an entire government system in under 3 days using Experian Pandora. With conventional approaches this would have taken weeks."

- John Morris, author of Practical Data Migration

This guide outlines the benefit of delivering your next data migration initiative using Experian Pandora.

Impact Assessment and Scoping

Secure Data Extraction and Preparation

Data Profiling and Data Discovery

Source-to-Target Mapping & Validation

Data Migration Prototyping & Testing

Ready-Made Data Archival Solution

Collaboration and Coordination

Comprehensive Data Quality Management

Data Migration Execution

Post-Migration Data Assurance

PDMv2: Fully Compliant

Experian Pandora for Data Migration Leaders

Impact Assessment and Scoping

Experian Pandora provides all the functionality required to implement a complete pre-migration impact assessment. This risk-averse strategy, allows data migration leaders to more accurately forecast, plan and resource your data migration project while flagging high-risk obstacles, even before the project has commenced.

Secure Data Extraction and Preparation

With one click, Experian Pandora can extract data from a wide variety of sources direct to its native and secure repository.

Your security policies are then assured through role-based permissions and selective encryption.

Data Profiling and Data Discovery

Experian Pandora allows you to instantly profile your entire data landscape with exceptional performance.

Your team can combine advanced profiling with relationship discovery to find hidden relationships, rules and gaps across disparate legacy systems.

Source-to-Target Mapping & Validation

Experian Pandora enables your migration analysts to automatically discover data migration rules between source and target.

The team can then iteratively validate migration mapping designs using the Experian Pandora Protyping and Data Quality Assessment functionality.

Data Migration Prototyping & Testing

Experian Pandora allows full, end-to-end data prototyping, validation testing and legacy-to-target reconciliation assurance.

This enables your users to go live with a fully operational target environment that meets your data validation requirements.

Ready-Made Data Archival Solution

Experian Pandora features its own, secure, highly compressed, data repository.

As a project leader, this gives you the confidence that a fully accessible data store can be retained and retrieved following go-live, enabling post migration assurance or compliance with data retention policies.

Collaboration and Coordination

Experian Pandora allows you to organise a complete data migration from a single platform.

It allows project leaders to visually track and coordinate key migration-critical milestones such as data quality progress, data mapping completion and data migration execution readiness.

Comprehensive Data Quality Management

Experian Pandora is powered by a complete data quality platform that includes data quality rule discovery, management and defect cleansing.

Projects leaders can now coordinate the assessment, improvement and monitoring of data across the migration lifecycle, all in one tool.

Data Migration Execution

Experian Pandora connects directly with target systems or can build complex load files for controlled upload.

Due to its own data quality management environment, Experian Pandora ensures that your target platform will load with perfect quality data.

Post-Migration Data Assurance

Why migrate data to a new system then watch its quality degrade?

With Experian Pandora, you can deliver a complete handover to the business of a fully operational data quality and data governance platform that can measure, analyse, improve and report on data quality levels long after the migration has completed.

PDMv2: Fully Compliant

Experian Pandora is one of the few data management solutions that is fully certified against the PDMv2 Data Migration Methodology.

This provides confidence that each phase of your data migration will be supported by the functionality of Experian Pandora.
