

Experian Pandora for Data Quality Leaders

Helping you embed robust data quality controls that make your data assets fit for purpose

Take control of your data assets with Experian's next generation data quality technology

Experian Pandora

As a data quality leader, you have many challenges:

- Pressure from stakeholders to demonstrate data quality assurance
- Demands to operationalise data quality across the business
- Constant need to support the corporate data governance function
- Implementation and assessment of corporate data standards
- Rollout of issue management, measurement and monitoring capabilities

Faced with these demands, many data quality leaders are turning to Experian Pandora to help them realise their vision and strategy for data quality adoption.

Experian Pandora is designed for the progressive data quality leader who needs to equip their business with a powerful, yet easy to use platform, delivering class-leading performance and functionality.

Experian Pandora allows you to operationalise your data quality strategy by delivering a range of critical functions ideally suited to the complex regulatory and operational needs of the modern organisation.

“You can deploy Experian Pandora very quickly. Business users like it because it is easy to get to grips with and it is straightforward and easy to use.”

- Richard O'Neill, Data Quality Manager - Financial Times

This guide outlines several of those functions and how they benefit data quality leaders.

Issue Management and Resolution

Group-wide Data Governance Support

Stakeholder Management

Collaboration and Communication

Regulatory Compliance

Operational Data Quality Management

Experian Pandora for Data Quality Leaders

Issue Management and Resolution

The unique data discovery capability of Experian Pandora enables your team to get to the root of problems rapidly so they can start to implement long-term preventions and ongoing governance controls. Experian Pandora even provides alerts and active monitoring to help your team respond rapidly to any issues that arise.

Group-wide Data Governance Support

It is an increasing requirement in many organisations for the data quality leader to provide comprehensive support of the data governance function.

To enable you, Experian Pandora provides a range of governance-specific capabilities such as data lineage mapping, business glossary management, financial impact analysis, stewardship monitoring, governance workflows, data standards enforcement and stakeholder reporting.

With Experian Pandora, you can champion the benefits of data governance by clearly demonstrating the financial and risk benefits delivered by your data quality initiatives.

Stakeholder Management

Experian Pandora allows you to deliver a stakeholder management strategy that reflects the varying levels of engagement required by each stakeholder group across your data quality framework.

For example, your team can create interactive dashboards for business leaders that demonstrate the benefit of stewardship and data quality management across business lines, key data areas or compliance requirements.

Stakeholders can even use existing reporting tools to interrogate Experian Pandora and visualise management information in the same way they receive reports on risk, financials and other performance metrics.

Collaboration and Communication

Experian Pandora is a secure platform that allows each member of the data quality and data governance function to work together and deliver the tasks you assign as part of an integrated data quality and data governance framework.

With minimal training, your team will be able to roll out an integrated platform allowing data quality rules to be discovered, assessed, assigned and resolved, all within a collaborative workflow that spans multiple teams and organisational boundaries.

Regulatory Compliance

Data quality leaders increasingly need to meet the demands of compliance regulations in a rapid, repeatable manner, while delivering a strong 'value-add' to business sponsors in the form of cost savings and streamlining.

Experian Pandora allows data stewards and knowledge workers to model regulations as a set of data quality rules that can be shared across the business and executed on-demand.

This allows your compliance teams to respond to any queries from the regulator in a timely and accurate manner whilst increasing governance and quality improvement for everyday operations.

Operational Data Quality Management

Your goal is to extend a data quality framework across the wider organisation. One challenge of operationalising data quality is ensuring that your data quality vision can scale without undue demands being placed on IT and technical teams.

Experian Pandora reduces the dependency on IT through the use of its business focused interface, low administrative footprint and rapid user productivity.
